Neural Fields: Theory and Applications

Neural Fields: Theory and Applications

Neural field theory has a long-standing tradition in the mathematical and computational neurosciences. Beginning almost 50 years ago with seminal work by Griffiths and culminating in the 1970ties with the models of Wilson and Cowan, Nunez and Amari, this important research area experienced a renaissance during the 1990ties by the groups of Ermentrout, Robinson, Bressloff, Wright and Haken. Since then, much progress has been made in both, the development of mathematical and numerical techniques and in physiological refinement und understanding. In contrast to large-scale neural network models described by huge connectivity matrices that are computationally expensive in numerical simulations, neural field models described by connectivity kernels allow for analytical treatment by means of methods from functional analysis. Thus, a number of rigorous results on the existence of bump and wave solutions or on inverse kernel construction problems are nowadays available. Moreover, neural fields provide an important interface for the coupling of neural activity to experimentally observable data, such as the electroencephalogram (EEG) or functional magnetic resonance imaging (fMRI). And finally, neural fields over rather abstract feature spaces, also called dynamic fields, found successful applications in the cognitive sciences and in robotics. Up to now, research results in neural field theory have been disseminated across a number of distinct journals from mathematics, computational neuroscience, biophysics, cognitive science and others. There is no comprehensive collection of results or reviews available yet. With our proposed book Neural Field Theory, we aim at filling this gap in the market. We received consent from some of the leading scientists in the field, who are willing to write contributions for the book, among them are two of the founding-fathers of neural field theory: Shun-ichi Amari and Jack Cowan.

From reader reviews:

Ginger Amundson:

Information is provisions for people to get better life, information presently can get by anyone on everywhere. The information can be a understanding or any news even a huge concern. What people must be consider if those information which is inside former life are challenging be find than now's taking seriously which one works to believe or which one the particular resource are convinced. If you find the unstable resource then you buy it as your main information we will see huge disadvantage for you. All of those possibilities will not happen throughout you if you take Neural Fields: Theory and Applications as your daily resource information.

Patricia Whitmore:

The book with title Neural Fields: Theory and Applications includes a lot of information that you can study it. You can get a lot of help after read this book. This particular book exist new information the information that exist in this e-book represented the condition of the world today. That is important to yo7u to be aware of how the improvement of the world. This specific book will bring you in new era of the internationalization. You can read the e-book on the smart phone, so you can read that anywhere you want.

Bridget Dell:

Playing with family in a park, coming to see the ocean world or hanging out with buddies is thing that usually you might have done when you have spare time, in that case why you don't try thing that really opposite from that. Just one activity that make you not sense tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love Neural Fields: Theory and Applications, you may enjoy both. It is excellent combination right, you still need to miss it? What kind of hang-out type is it? Oh come on its mind hangout men. What? Still don't understand it, oh come on its referred to as reading friends.

Steven Hackett:

Reading a book to get new life style in this season; every people loves to learn a book. When you go through a book you can get a wide range of benefit. When you read ebooks, you can improve your knowledge, since book has a lot of information into it. The information that you will get depend on what sorts of book that you have read. If you need to get information about your study, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this sort of us novel, comics, along with soon. The Neural Fields: Theory and Applications provide you with new experience in reading through a book.
